AIDCF-007A
Control Universe Constitutional Amendment

Approved 15 / 90 / 360 Baseline

Field	Value
Artifact ID	AIDCF-007A-AMD-001
Status	Approved baseline
Author	Siva Sethumadhavan
Applies to	AIDCF-007 and all downstream AIDCF artifacts
Approved control universe	15 domains; 90 control families; 360 normative controls
Superseded statement	14 domains; 84 families; 336 controls
Registry	AIDCF-007A Canonical Master Control Registry v1.0

1. Constitutional decision

The authoritative AIDCF control universe consists of 15 control domains, 90 control families and 360 normative controls. Each domain contains six control families and 24 controls. Each family contains four controls. This decision is the sole cardinality baseline for AIDCF-007 and all dependent artifacts.

2. Supersession

Every statement declaring 14 domains, 84 families or 336 controls is deprecated and superseded. Such statements shall not be used for coverage, scoring, conformance, reporting, machine execution or assurance decisions after adoption of this amendment.

3. Canonical identifiers

The existing identifiers MCF-<DOMAIN>-001 through MCF-<DOMAIN>-024 remain stable. Family identifiers use <DOMAIN>-01 through <DOMAIN>-06. Identity is immutable; future meaning-changing replacements require a new identifier and an explicit supersession record.

4. Approved domain model

Code	Domain	Families	Controls	Primary gates
GOV	Governance, Accountability and Assurance Direction	6	24	CG-13; CG-14
CAP	AI Capability, Service Outcome and Demand Management	6	24	CG-01; CG-02
DEP	Dependency, Concentration and External Reliance Management	6	24	CG-03; CG-12
PHY	Physical Site, Building and Security Infrastructure	6	24	CG-02; CG-04
POW	Electrical Power Infrastructure and	6	24	CG-05

	Energy Continuity			
THM	Cooling, Thermal and Fluid Infrastructure	6	24	CG-06
ENV	Environmental and Resource Performance	6	24	CG-02; CG-04
CMP	AI Compute Infrastructure	6	24	CG-08
STO	AI Storage and Data Infrastructure	6	24	CG-08; CG-10
NET	AI Network and Interconnect Architecture	6	24	CG-08
OPS	Building Operations and Service Management	6	24	CG-07; CG-13; CG-14
RES	Resilience, Continuity and Recovery	6	24	CG-09; CG-10
SUP	Supply Chain, OEM and Ecosystem Assurance	6	24	CG-03; CG-13
SEC	Digital, OT and Control-Plane Security	6	24	CG-07; CG-15
EVA	Evidence, Assessment and Assurance Management	6	24	CG-11; CG-12

5. Registry authority

The accompanying workbook is the canonical machine-readable registry. It contains the domain, family and control inventories plus APS, gate, ontology, failure, graph, evidence, assessment, assurance-level, lifecycle, UNKNOWN and reassessment mappings. Where narrative text and the registry conflict, the approved amendment and controlled registry govern cardinality and identifiers; substantive control changes still require controlled methodology review.

6. Normative governance rules

- No domain, family or control may be deleted from an approved baseline.
- Records may be ACTIVE, DEPRECATED or SUPERSEDED.
- Profiles may strengthen or add requirements but may not silently weaken the baseline.
- Not Applicable requires approved rationale; missing evidence is UNKNOWN.
- Critical-gate status remains separate from scores and maturity.
- All control changes require impact analysis across AIDCF-008 through AIDCF-015 and AITG mappings.
- Testing remains authorised, competent, proportionate and safe.

7. Downstream migration

Artifact	Required action
AIDCF-008	Reconcile control-to-evidence profiles to 360 controls.
AIDCF-009	Confirm 360 procedures and 90 family workbooks use canonical IDs.
AIDCF-010	Confirm scoring denominator, family/domain aggregation and gate overlays.
AIDCF-011	Update program profiles and coverage reporting.
AIDCF-012	Update report disclosures and control coverage

	registers.
AIDCF-013	Reconcile domain architecture control links.
AIDCF-014	Publish corrected registries, schemas and migration record.
AIDCF-015	Replace PILOT-* identifiers with canonical MCF identifiers and close BI-001/NC-01 after validation.

8. Acceptance tests

- Exactly 15 unique domain codes.
- Exactly 90 unique family IDs, six per domain.
- Exactly 360 unique control IDs, 24 per domain and four per family.
- No duplicate or orphan control/family identifiers.
- Every control has APS, critical-gate, ontology, failure, graph, evidence, assessment, UNKNOWN and reassessment mappings.
- Every control has status and version.

9. Controlled-review caveat

The approved cardinality and identifiers are now fixed. The substantive adequacy of individual control wording and mappings remains subject to multidisciplinary controlled review, calibration and pilot evidence. This amendment does not create certification, engineering approval or assurance by itself.
